University of South Alabama

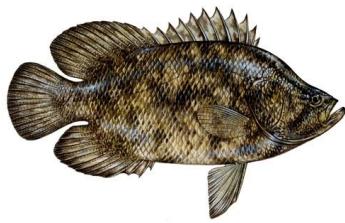

Tripletail *Lobotes surinamensis*

Circumglobal distribution

Warmwater

Not gregarious, associated with
floating structures (e.g.
Sargassum)

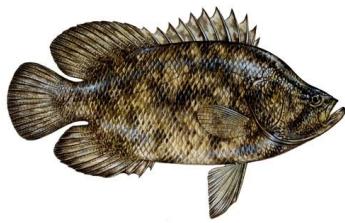

Tripletail US fisheries

- US fishery primarily recreational
- Average annual U.S. dockside value \$25,000 (GSMFC, 2016)
- Markets supplied by imports from South America (landings ~3 Million lbs/y GSMFC, 2016)
- Species managed with minimum size and bag limits

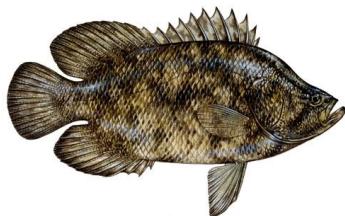

FL 15 inch (1996), 2/rec angler,
10/com angler, AL 18 inch (2012)
3/angler, MS 18 inch (2014) 3/angler,
LA 18 inch (2014) 5/rec angler 100
lb/com angler, TX 17 inch (2006)
3/angler

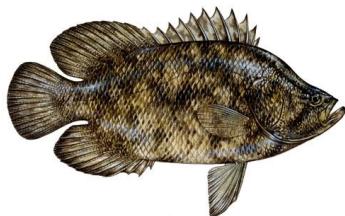

Tripletail Life-History

- Adult found around flotsam
- Summer spawner (June-Aug)
- Multiple batch spawner (Brown-Peterson, Franks, 2001)
- Larvae pelagic in surface waters (Ditty, 1994)
- Juveniles in coastal shallow waters

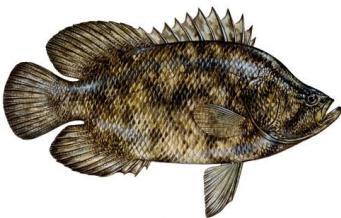

Aquaculture programs

- Interest related to flesh quality and anticipated fast growth rate
- USM pilot projects 2005, 2010-2014, 2017-2018, 2020-22
- Oceanus seafarms, horsecreek aquafarms

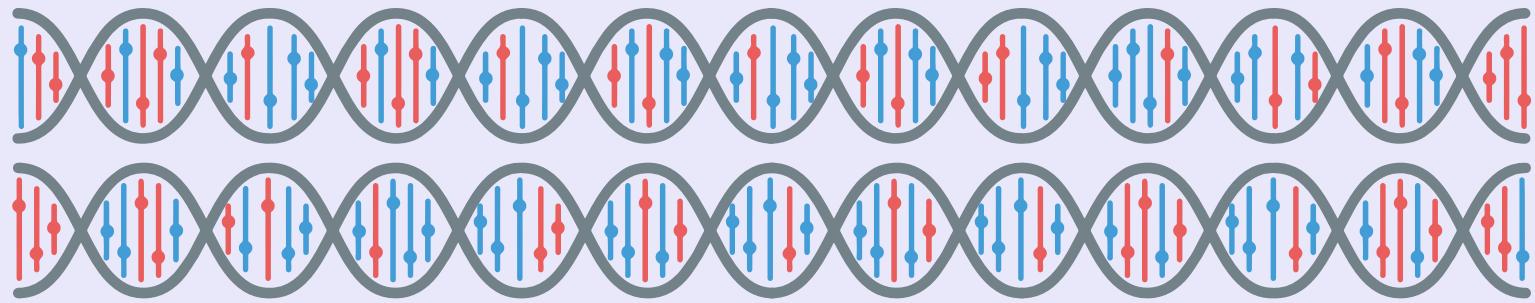

Study objectives

- Develop genomic resources (draft reference genome)
- Survey wild populations of tripletail in the US and abroad to assess stock structure in US waters and connectivity with other stocks

Genome sequencing

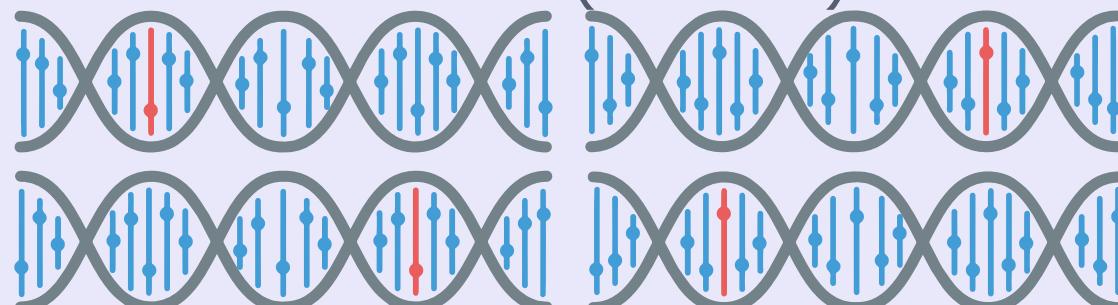

Sequencing of one tripletail specimen

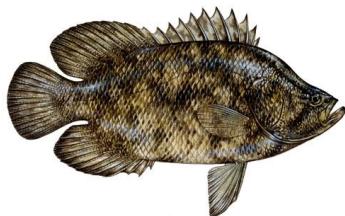

Long reads (PacBio)

+

Short reads (Illumina)

Draft Genome Assembly

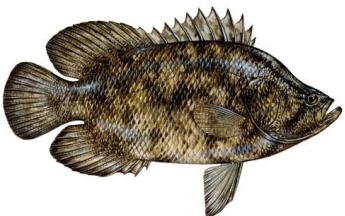

Sequencing reads assembled to generate contigs and scaffolds

Contig: contiguous sequence data

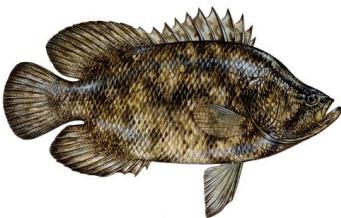

Scaffold: multiple contigs joined by gaps

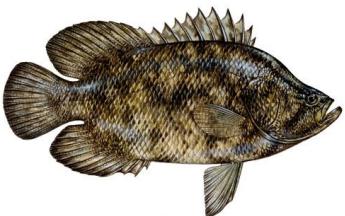

Draft reference genome

- 8 PAC Bio SMRT cells 43.1 Gb (estimated 73X coverage)
- Illumina short reads 206,582 Gb (345X coverage)
- Linkage map to anchor contigs 92 parents and 280 larvae

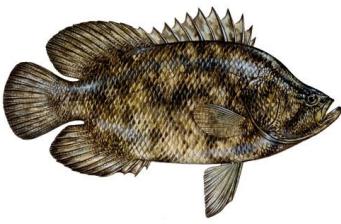

Draft reference genome assembly

- SparseAssembler - assemble illumina reads into contigs
- DBG2OLC - assemble pacbio reads and illumina contigs
- Blasr/pbdagcon - consensus using trimmed illumina reads
- Pilon - polishing using trimmed + aligned illumina reads

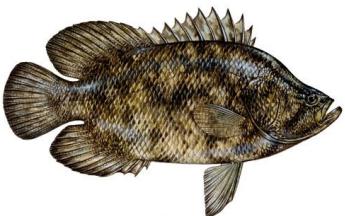

Draft reference genome

- Genome size estimate (k-mer)
585,001,442 bp
- Draft genome hybrid assembly
- 322 contigs > 50,000 bp (98.9% assembly), N50 3,392,625, L50: 51
- Linkage map to scaffold contigs in linkage groups
- Population structure study across the range

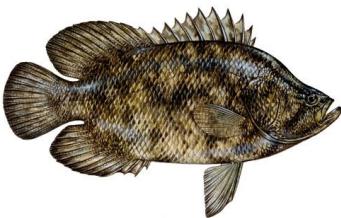

Population study - Sampling

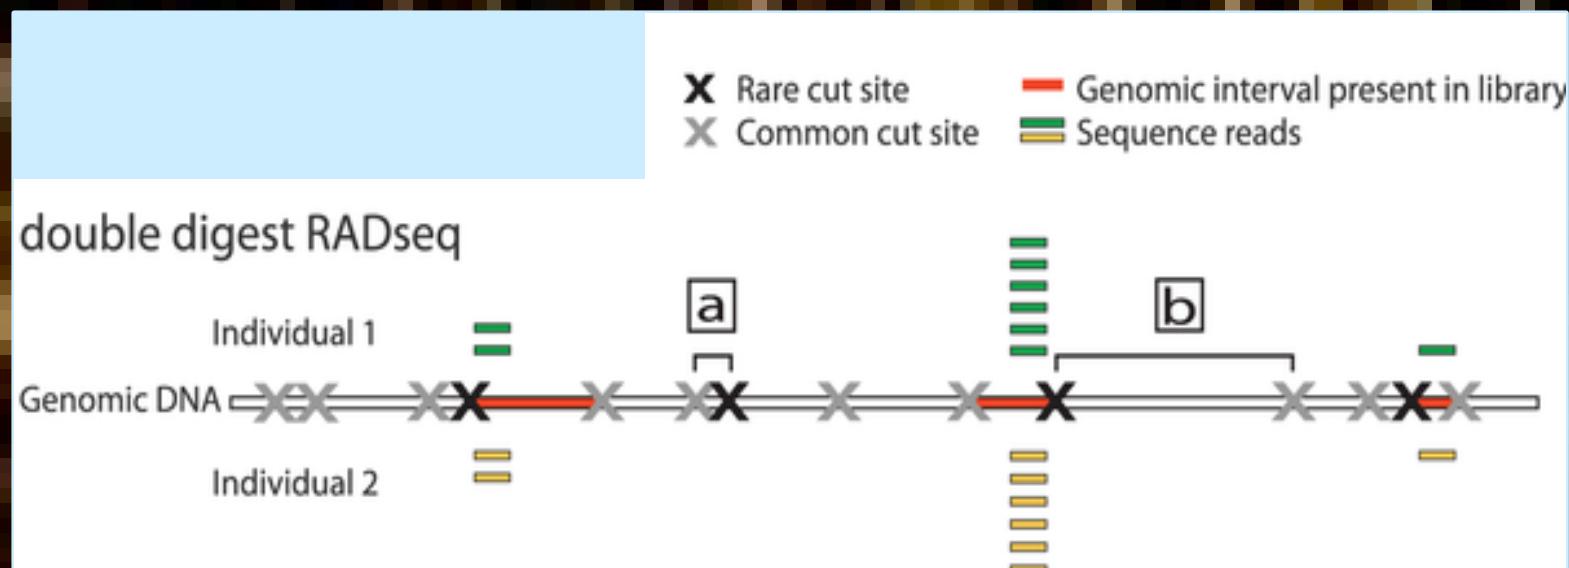

Sampling

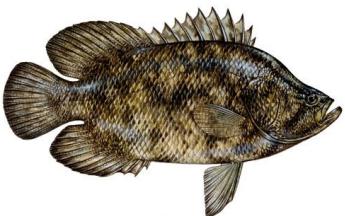

| Location | Collection Year | Number of Samples | Total # Samples from Location | Samples Used |
|--------------|-----------------|-------------------|-------------------------------|--------------|
| Georgia | 2012 | 15 | 56 | 56 |
| | 2014 | 22 | | |
| | 2019 | 19 | | |
| Mississippi | 2017 | 68 | 221 | 118 |
| | 2018 | 89 | | |
| | 2019 | 64 | | |
| Australia | 2016/17 | 30 | 50 | 50 |
| | 2018 | 20 | | |
| Florida EC | 2018 | 32 | 32 | 32 |
| Florida GC | 2018 | 59 | 59 | 59 |
| Florida Keys | 2019 | 77 | 77 | 77 |
| Texas | 2019 | 10 | 10 | 10 |
| Peru | 2019 | 50 | 50 | 50 |
| Brazil | 2019 | 18 | 18 | 18 |
| Senegal | 2020/21 | 62 | 62 | 62 |
| Benin | 2021 | 62 | 59 | 59 |
| Malaysia | 2019 | 11 | 11 | 0 |
| Turkey | 2021 | 27 | 27 | 27 |
| Total | | | 641 | 609 |

ddRAD-Tag Sequencing

DNA digested by restriction enzymes Eco-RI and MspI
Illumina adapters and sample-specific barcodes ligated to
fragments
100 samples pooled and sequenced together

SNP Discovery and Filtering

ddRAD-Seq reads analyzed in the dDocent-FB pipeline (Puritz et al. 2014)

SNPs filtered to include:

SNPs with a minimum quality score of 30

Individual genotypes covered by 10 or more reads

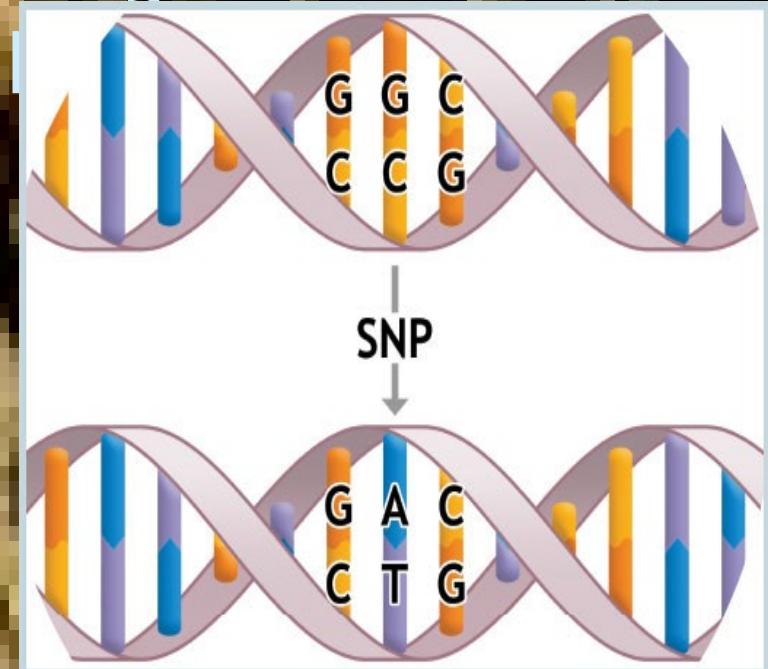

Individual genotypes with a genotype probability > 0.99

SNPs called in at least 80% of individuals

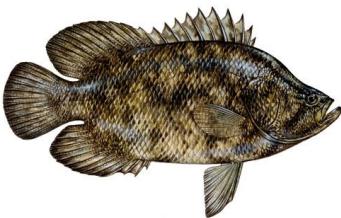

Minor allele frequency > 0.01

→ 25,293 SNPs in 363 individuals

Single Nucleotide

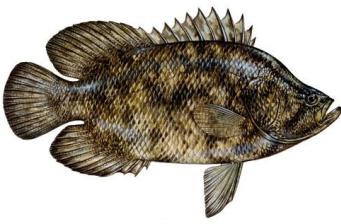

48 AUS, 15 BRA, 29 FLE,
45 FLG, 44 G, 128 MS,
47 PER, 7 TX

Population structure analysis

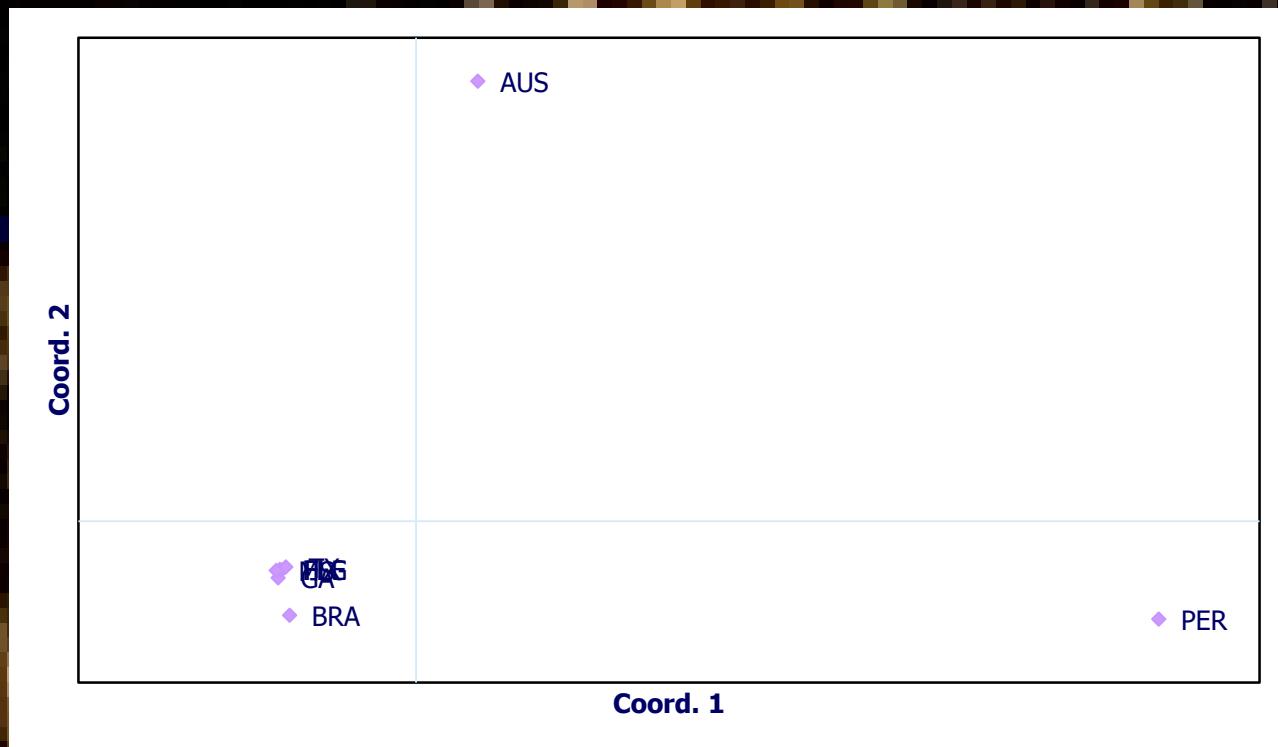

Analysis of molecular variance

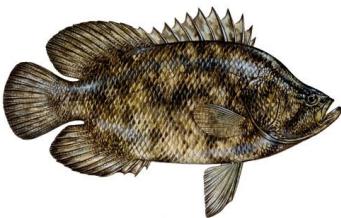

| Source of variation | d.f. | Fstatistic | % variance | P |
|-------------------------------------|------|-------------|------------|--------|
| Among groups | | 4Va (FCT) | 52 | 0.03 |
| Among populations within groups | | 3Vb (FSC) | 0.04 | 0.02 |
| Among individuals w. populations | | 325Vc (FIS) | 0.53 | 0.1 |
| Within individuals | | 333Vd (FIT) | 47.43 | <0.001 |

Population structure analysis

Principal coordinates (PCoA) Axis 1 and 2 explain 71% and 26% of the variance respectively

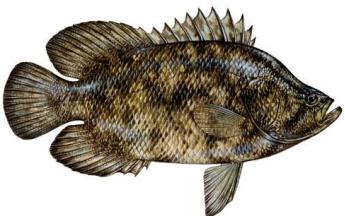

Population structure analysis

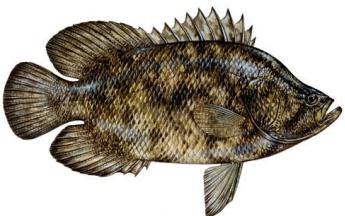

Pairwise F_{ST} (genetic distance) between sampled regions

| | AUS | BRA | FLE | GA | FLG | MS | TX |
|-----|----------|----------------|----------------|-----------------|----------------|----------------|----------|
| BRA | 0.33654* | | | | | | |
| FLE | 0.28089* | 0.02558 | | | | | |
| GA | 0.28985* | 0.02264 | 0.00136 | | | | |
| FLG | 0.28077* | 0.02394 | 0.00006 | 0.00132* | | | |

| TX | 0.27836* | 0.03115 | 0.00146 | 0.00237 | 0.00184 | 0.00217 | |
| PER | 0.7261* | 0.71848* | 0.71772* | 0.72299* | 0.72085* | 0.72704* | 0.71285* |

Current steps

- Include recent samples in analysis (reruns and East Atlantic populations from Senegal, Benin and Turkey)
- Fine scale analysis of West Atlantic to assess
 - Spatial autocorrelation and isolation by distance
 - Temporal stability
 - Migrants from East Atlantic
